The difference resulting from the above comparison, founded on documents equally public, exceeds 52 per cent. of increase in 18 years; and if the same proportion continues, the population of the Philippine Islands will be doubled in 34 years; an increase that might be deemed incredible, if we had not the extraordinary example of Philadelphia having doubled its population in 28 years, as is affirmed by Buffon, on the authority of Dr. Franklin.

REMARKS.—In good seasons, the profit of the planter often increases in an extraordinary degree. The 4000 sprouts of sugar-cane, for example, sometimes produce him 28 instead of 14 loaves of sugar, and the caran, or measure of rice, 80 and even as many as 100 measures, instead of 35, as above computed. Out of 15 and even 10 vats of dye, he occasionally obtains a quintal of indigo, instead of 25 vats, the proportion above stated. If the planter is a man of easy circumstances, and enabled to send his produce to the general market, in order to sell it to the merchants or captains wanting it, he obtains a much better price than by selling it on the spot to the intermediate purchasers. I have seen the quintal of La Laguna in-

Indigo sold in Manilla at the rate of 130 dollars, when the quality was very superior, and the ordinary one at 100 dollars; the loaf of sugar at 4 dollars, 5 rials, and the measure of *paley* or husked rice at 3 dollars; but I have preferred taking a medium sale price in the preceding statement, in order to shew in a clearer point of view the advantages derived from planting in the Philippine Islands.
